

Liberty Valley Doors—

Since 1980, *Liberty Valley Doors* has been a leader in custom stile and rail door production—providing residential and commercial customers with innovative, high-end products. Recognizing his customers' desire to have a rustic yet elegant, eco-friendly product, owner Mike Pastryk saw an opportunity to salvage this antique lumber and create a new line of doors combining the flawed beauty of old wood with his state-of-the-art engineering process. Now *you* can join in their efforts to re-use this precious resource and feel proud that the doors you purchase are made from nearly 100% reclaimed wood.

RW-3-ISA

Available in 20 minute

RW-3-SA

(shown with optional recessed moulding)

Liberty Valley Doors is proud to offer a line of doors reclaimed from the wood our ancestors used to build our nation.

The Unique Beauty of "Rediscovered Wood" Doors

Seasoned lumber—better than new—unlike anything else you can get today. Each aged piece of lumber features deep beautiful colors and character that can only be achieved with time. Every door is different, every door unique.

Liberty Valley Doors has reclaimed this quality lumber from buildings destined for landfills and recycled it into beautiful interior doors and entryways for your home. In rescuing this antique lumber, we are helping to conserve the forest and invaluable stands of old growth timber. This creates a wood door with a history all its own.

▪ Standard square sticking

▪ Optional recessed square moulding
▪ Optional square pegs

Standard Features—

Most materials used in the manufacturing of each door are from recycled Douglas Fir beams, joists and timbers. Reclaimed glue lam beams are sliced for the core of the stiles and rails for engineered stability, and overlaid with rediscovered wood. Each panel plank is glued to a core of at least 30% recycled wood product for integrity and to eliminate see-through at the splits, knots and other natural characteristics. None of the unique qualities of this reclaimed wood will interfere with hinge screws or lock face plates in normal locations. Doors are sanded, ready for finishing. Designs include 1-, 2- or 3-panel layout, with or without inside or outside segment arches.

Options include:

- Recessed square molding
- Square pegs where the stiles meet the rails
- Pre-finishing; light or dark glaze (*see photos*)
- Jamb & trim
- Pre-machining
- Pre-hanging

Technical Specifications—

- Made from nearly 100% reclaimed wood (*panel core is 30% recycled product*)
- 1 3/4" thick, 2 1/4" at 20 minute (*custom thicknesses available*)
- 2° to 3° wide (*custom widths available, may change plank quantity*)
- 6°, 7°, 7° and 8° tall (*custom heights available*)
- 4 7/8" stiles, top and intermediate rails (*before sizing*)
- 9 3/4" bottom rail (*before sizing*)
- 3/4" thick flat panels, 3 planks wide with irregular hand-eased edges
- Square sticking, knots & splits
- Unfinished (*pre-finishing available*)
